

Confidence on collars mowed at 1.3 cm

▶ Have Confidence in your turf

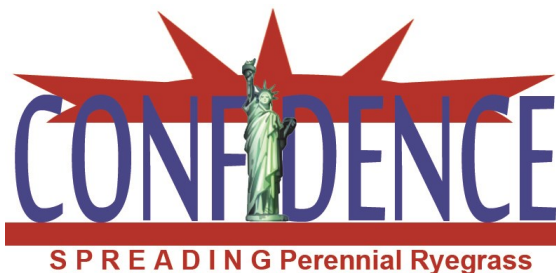

Normal perennial ryegrass does not spread, but new technology brings you Confidence that naturally produces reproductive tillers allowing it to self-repair.

In trials testing spreading abilities, Confidence shows remarkable gains versus other ryegrasses marketed as a spreading ryes.

▶ Ability to Spread

Confidence in South Africa showing lateral spreading

▶ Newly Registered

In addition to its spreading abilities and turf quality, Confidence's recommended seeding rate is lower than other ryes marketed as spreading:

Confidence = 15-20 g/m<sup>2</sup> while non-spreading ryes = 40-50 g/m<sup>2</sup>

Count on additional savings by using less seed to cover, and KEEP coverage, with Confidence.

▶ Less Mowing, Saves Money

▶ Low growth habit
